Intestinal stents catheter triple channel catheters.	24

ONE-STEP METHOD DRAINAGE SET

Set components:

straight or pigtail type catheter
two pieces needle
band clip
collar

Reference:	Catheter size / length	Two-pieces needle size
OSD6F	6F/26 cm PIGTAIL	18G
OSD6FP	6F/26 cm STRAIGHT	18G
OSD9F	9F/26 cm PIGTAIL	15G
OSD9FP	9F/26 cm STRAIGHT	15G
OSD12FP	12F/26 cm PIGTAIL	15G

OSD14FP	14F/26 cm PIGTAIL	15G
OSD16F	16F/26 cm STRAIGHT	15G

Straight or pigtail catheter is well visible in X-rays. Simple one-step system eliminates the need of using needle, guide wire, or drain placement radiological control. Safe, atraumatic drain prevents wound perforation. It is used for fluid drainage from the pleura, peritoneum, and cysts. Drains 9F and bigger allow for abscess drainage.

When ordering use Ref. Number, e.g.: OSD16F.

TWO-STEP METHOD DRAINAGE SET

Set components:

Pigtail or straight type catheter
 needle 18G x 7 cm
 two pieces needle
 guide wire thin, flexible spring .035" x 60 cm
 dilatator
 one way stopcock
 connecting tube
 band clip, collar

Reference:	Catheter size / length	Two-pieces needle size	Dilatator size / length

ZPDA16F	16F/26 cm STRAIGHT	15G	16F/18 cm

The catheter is made of biologically neutral material, well visible in X-rays. The curved tip prevents catheter displacement inside the tissues. Its smooth surface, thin walls, large side holes and adequately selected type of plastic material make drainage effective for a prolonged period of time. A one-way stopcock and extender allow attachment to a standard urine collection bag.

When ordering use Ref. Number, e.g.: ZPDA12F.

EMBOLECTOMY CATHETERS

Fogarty's, single lumen

The embolectomy catheters are used for the safe and convenient removal of thromboembolic material from arteries and veins. The catheters for embolectomy are made of biologically indifferent material. Their elasticity is matched to their size. The balloon is made of latex. It withstands the pressure indispensable for achieving of satisfactory effect. A silk thread is an additional fastening of the balloon. Each size has the colour corresponding to the international colour code. Marks are made at intervals of 10 cm. Stainless steel mandrin facilitates catheter introduction into the vessel. The soft spherical tip reduces to a minimum the probability of vessel wall perforation. The other end of the catheter has a Luer-Lock attachment. The catheter diameter and balloon volume are given on each catheter. Sterilization is with gamma radiation. Single lumen Fogarty catheters can be used for removal of concrements from bile ducts.

EMBOLECTOMY CATHETERS

Fogarty's, double lumen

The embolectomy catheters are used for the safe and convenient removal of thromboembolic material from arteries and veins. The catheters for embolectomy are made of biologically indifferent material. Their elasticity is matched to their size. The balloon is made of latex. It withstands the pressure indispensable for achieving of satisfactory effect. A silk thread is an additional fastening of the balloon. Each size has the colour corresponding to the international colour code. Marks are made at intervals of 10 cm. Stainless steel mandrin facilitates catheter introduction into the vessel. The soft spherical tip reduces to a minimum the probability of vessel wall perforation. The other end of the catheter has a Luer-Lock hub. The catheter diameter and balloon volume are given on each catheter. Sterilization is with gamma radiation. Double lumen Fogarty catheters can be used for removal of concretions from bile ducts. Balloon made of latex, silk thread suture to increase connection strength with catheter. Protection against UV radiation.

When ordering use Ref. Number, e.g.: EFBD7F80.

AORTIC CATHETER

Used for rinsing during organ transplants. The triple channel aortic catheter has two balloons of 20 ml or 35 ml volume each. The catheter between the balloons is perforated. The proximal and distal catheter tips are marked.

SURGICAL FIELD ASPIRATION CATHETER
with or without suction control

Operation field suctioning catheter allows the suctioning of blood, flushing solutions, and discharges from the operation field. A catheter with adequate distal tip (curved or straight tip) can be selected depending on suctioning place location. Clear to allow visual examination of drainage.
Catheter available in configuration with suction strength control or without it.

SURGICAL WOUNDS ASPIRATION CATHETER (ILEOSTOMY)

The surgical aspiration catheter (ileostomy) is used during abdominal surgery. It allows the suction of intestinal contents at a long distance. Length 200 cm, perforated on 120 cm. Size 21F.

The catheter is made of thermoplastic (medical grade) PVC.

Reference:

KOR021F200

When ordering use Ref. Number, e.g.: KOR021F200.

REDON – TYPE ASPIRATION CATHETER

Used for drainage. Conventional perforation eyes (Redon type).
Made of PCV, medical grade.

P35300TE	.035"	300 cm

TRACHEAL AND ESOPHAGEAL STENT **TOR** with delivery system

Tracheal and esophageal Tor stent is made of nitinol, which is material of high biocompatibility.

Tor stent with the delivery system provides high efficiency and comfort of application during an attempt to restore patency of highly stenotic trachea, bronchi or esophagus.

Thanks to its perfect elasticity the stent perfectly matches the shape of the trachea and esophagus.

A special construction of the stent protects against migration.

The delivery system is characterised by high elasticity.

Atraumatic endings of the system minimise the risk of damage during the procedure.

Technical information

Stent made of nitinol.

Very high radial force of the stent.

Rounded endings of the stent which efficiently protect the walls of the trachea and esophagus against damage.

Very good stent radiopacity - platinum markers on the stent endings which allow for precise implantation.

Atraumatic ending of the delivery system.

Size of the delivery system - 14F.

KR12F40M2	12F	40 cm	.035"	2 cm
KR12F40M4	12F	40 cm	.035"	4 cm

When ordering use Ref. Number, e.g.: KR12F40M2.

DILATING CATHETER Soehender type

The catheter for dilating is made of high quality material (X-ray visible) with a 3 cm cone tip. At the other end the catheter has a luer-lock (mobile) hub. Used for dilatation of bile ducts.

Reference:	Catheter size	Catheter length	Use with guide wire
KR6F	6F	200 cm	.035"
KR7F	7F	200 cm	.035"
KR8F	8F	200 cm	.035"
KR9F	9F	200 cm	.035"
KR10F	10F	200 cm	.035"
KR11.5F	11.5F	200 cm	.035"

When ordering use Ref. Number, e.g.: KR10F.

ORAL BILIARY DUCTS DRAINAGE SET

Set components:

Pigtail, Alfa or Straight catheter
guide wire /teflon-coated/ diameter .035", 480 cm long
nasal tube 50 cm long
two extensions with three - way stopcock

Reference: A type - alpha	Reference: PR type - straight	Reference: PI type - Pigtail	Catheter size / length	Extension with stop-cock length
ZPDDZA5F	ZPDDZPR5F	ZPDDZPI5F	5F / 250 cm	135 cm
ZPDDZA7F	ZPDDZPR7F	ZPDDZPI7F	7F / 250 cm	135 cm

Nasal biliary catheters used for external drainage of biliary ducts, are placed via a duodenoscope, allowing flushing biliary ducts and administering medicaments directly into biliary ducts.

Catheters feature Pigtail tips with side holes (Alfa loop option available as well), smooth inner surface facilitates bile flow. They are well visible in X-rays.

When ordering use Ref. Number, e.g.: ZPDDZA5F.

BILIARY PROSTHESIS INSERTION with STRAIGHT type prosthesis

Set components:

leading catheter
pushing catheter
guide wire /teflon coated/
STRAIGHT prosthesis
prosthesis shield

Reference:	STRAIGHT prosthesis size / catch interval	Guide wire diameter / length	Pushing catheter size / length	Leading catheter size / length	Prosthesis shield length
ZPDZ5F	5F / 5,7,9,12,15 cm	.035" / 400 cm	5F / 170 cm	- - -	80 mm
ZPDZ7F	7F / 5,7,9,12,15 cm	.035" / 400 cm	7F / 170 cm	- - -	80 mm
ZPDZ8.5F	8.5F / 5,7,9,12,15 cm	.035" / 400 cm	8.5F / 170 cm	5F/ 320 cm	80 mm
ZPDZ10F	10F / 5,7,9,12,15 cm	.035" / 400 cm	10F / 170 cm	6F/ 320 cm	80 mm
ZPDZ12F	12F / 5,7,9,12,15 cm	.035" / 400 cm	12F / 170 cm	6F/ 320 cm	80 mm
ZPDZ15F	15F / 5,7,9,12,15 cm	.035" / 400 cm	15F / 170 cm	6F/ 320 cm	80 mm

Particular components of the set can be ordered separately.

Biliary ducts internal drainage endoprosthesis in neoplastic and benign stenosis and some cases of cholelithiasis; placed via an endoscope.
Endoprosthesis feature:

- elasticity facilitating their introduction and at the same time material hardness preventing them from kinking;
- two "wings" (catch pawls) stabilizing their positioning;
- smooth inner surface facilitating reflux and reducing the possibility of occlusion;
- good visibility in X-rays;
- sets available in configuration with other types of stents: ZIMMON, GEENEN and PIGTAIL.

When ordering use Ref. Number, e.g.: ZPDZ8.5F15 (for catch interval 15 cm).

STRAIGHT type prosthesis

Prosthesis are used for internal biliary ducts drainage in neoplastic and benign stenosis and some cases of cholelithiasis; placed via an endoscope.

Prosthesis feature:

- elasticity facilitating their introduction and at the same time material hardness preventing them from kinking;
- two “wings” (catch pawls) stabilizing their positioning;
- smooth inner surface facilitating reflux and reducing the possibility of occlusion;
- good visibility in X-rays;

STRAIGHT

Reference:	size	catch interval
ESF	5F	5, 7, 9, 12, 15 cm
E7F	7F	5, 7, 9, 12, 15 cm
E8.5F	8.5F	5, 7, 9, 12, 15 cm
E10F	10F	5, 7, 9, 12, 15 cm
E12F	12F	5, 7, 9, 12, 15 cm
E15F	15F	5, 7, 9, 12, 15 cm

Once prosthesis catalogue number has been selected, include the required distance between the catch pawls.

When ordering use Ref. Number, e.g.: E10F5 (for catch interval 5 cm).

GREENEN type prosthesis

GREENEN

Reference:	size	catch interval
EGE5F	5F	3, 5, 7, 9, 12 cm
EGE7F	7F	3, 5, 7, 9, 12 cm

Once prosthesis catalogue number has been selected, include the required distance between the catch pawls.

When ordering use Ref. Number, e.g.: EGE5F3 (for catch interval 3 cm).

PIGTAIL type prosthesis

Prosthesis are used for internal biliary ducts drainage in neoplastic and benign stenosis and some cases of cholelithiasis; placed via an endoscope.

Prosthesis feature:

- elasticity facilitating their introduction and at the same time material hardness preventing them from kinking;
- smooth inner surface facilitating reflux and reducing the possibility of occlusion;
- good visibility in X-rays;

Reference:	PIGTAIL	
	size	catch interval
EPI7F	7F	5, 7, 10 cm
EPI10F	10F	5, 7, 10 cm

Once prosthesis catalogue number has been selected, include the required distance between the catch loops.

When ordering use Ref. Number, e.g.: EPI10F5 (for catch interval 5 cm).

ZIMMON type prosthesis

Reference:	ZIMMON	
	size	catch interval
EZI7F	7F	2, 4, 6, 8, 10, 12 cm
EZI10F	10F	2, 4, 6, 8, 10, 12 cm

Once prosthesis catalogue number has been selected, include the required distance between the catch pawl and the loop.

When ordering use Ref. Number, e.g.: EZI10F8 (for catch interval 8 cm).

DUODENAL TUBE

The duodenal tube is used for emptying duodenum in occlusive ileus, acute pancreas inflammation, paralytic ileus, and other clinical situations, depending on physician's discretion. The duodenal tube consists of a one lumen PVC tube. Due to transparency of the tube material aspirated contents observation is possible. The tube's distal tip allows its connection to syringes, adaptors, and other drains. The tube has a closed tip, either rounded or with a central hole. Each tube has four side holes.

SD16F125B	16F	125 cm	orange
SD18F125A	18F	125 cm	red
SD18F125B	18F	125 cm	red

When ordering use Ref. Number, e.g.:

SD8F125A - Type A - tip closed and rounded

SD16F125B -Type B - tip with central hole.

GASTRIC TUBE

The gastric tube is used for the quick aspiration of stomach contents or gastric lavage, for continuous emptying of the upper gastrointestinal tract in the case of bowel obstruction, for the administration of enteral nutrition in the case of advanced dysphagia and for the enteral feeding or administration of medicine to premature babies or small infants.

The gastric tube is made of a high class PVC medical grade material, having the required softness and elasticity. Transparency of gastric tube facilitates observation of aspirate. The gastric tube with big lateral side holes enable fast introduction of fluids and gastric contents aspiration.

SZ30F75	30F	75 cm	blue
SZ30F100	30F	100 cm	blue

When ordering use Ref. Number, e.g.: SZ26F75.

RECTAL TUBE

Rectal tube is used to drain anus lumen and the end-part of the rectum. The rectal tube consists of a single-lumen tube made of PVC. The tube is atraumatic due to specially selected material it is made of.

SR36F40A	36F	40 cm	blue
SR36F40B	36F	40 cm	blue

When ordering use Ref. Number, e.g.:

SR22F40A - Type A - tip closed and rounded with two side holes

SR18F30B - Type B - tip with central hole and two side holes.

GASTRIC CATHETER

The gastric catheter is used for the quick aspiration of stomach contents or gastric lavage, for continuous emptying of the upper gastrointestinal tract in the case of bowel obstruction, for the administration of the enteral nutrition in the case of advanced of dysphagia and for enteral feeding or administration of medicine to premature babies or small infants.

The gastric catheter is made of a high class PVC medical grade material, having the required softness and elasticity. The transparency of gastric catheter facilitates observation of aspirate. The distal tip (hub) of gastric catheter enables their connection to syringes, adapters and various drains. The central opened end and lateral side hole enable fast introduction of fluids and gastric contents aspiration.
